

Energy Management Policy

British Sugar's Energy Policy is to minimise the environmental impact and financial costs of our energy use across operations at our beet processing sites by:

- Committing to reduce our energy usage per tonne of product
- Implementing a responsible energy purchasing policy
- Reviewing targets and setting objectives on a yearly basis
- Fulfilling our compliance obligations for all appropriate legislation and other requirements

This policy statement is communicated to all of British Sugar's employees and contractors whose activities impact on energy usage.

Paul Kenward
Managing Director
